7. Data Provenance

Provenance legend:

Label	Meaning
OBSERVED	Measured directly by this platform (capture, DNS, hashing).
CALCULATED	Derived locally from supplied input.
EXTERNAL INTELLIGENCE	Quoted from a named provider with a retrieval timestamp.
USER PROVIDED	Analyst-supplied interpretation or attachment.
UNAVAILABLE	No data was returned; never fabricated.

Observed facts are measurements made by this platform (packet capture, DNS/TLS queries, local file hashing).

Calculated values are derived locally from supplied input. External intelligence is quoted verbatim from the named provider with a retrieval timestamp and may be incomplete or stale. Analyst notes are interpretation and are labelled as such. Absence of a threat-intelligence result does not imply an indicator is safe.
